

# PAPER PROJECTS

# INSECTS ARACHNIDS AND CREEPY CRAWLIES!

Print this page on uncoated card stock for best results!

I personally like to use 65 lb. Wausau® Bright White because it feeds well through my inkjet printer and it's thick enough to make a fantastic paper toy. Invent, design and color your spider using colored pencils. The gray outline is a loose suggestion of body shape, but don't limit yourself to it!

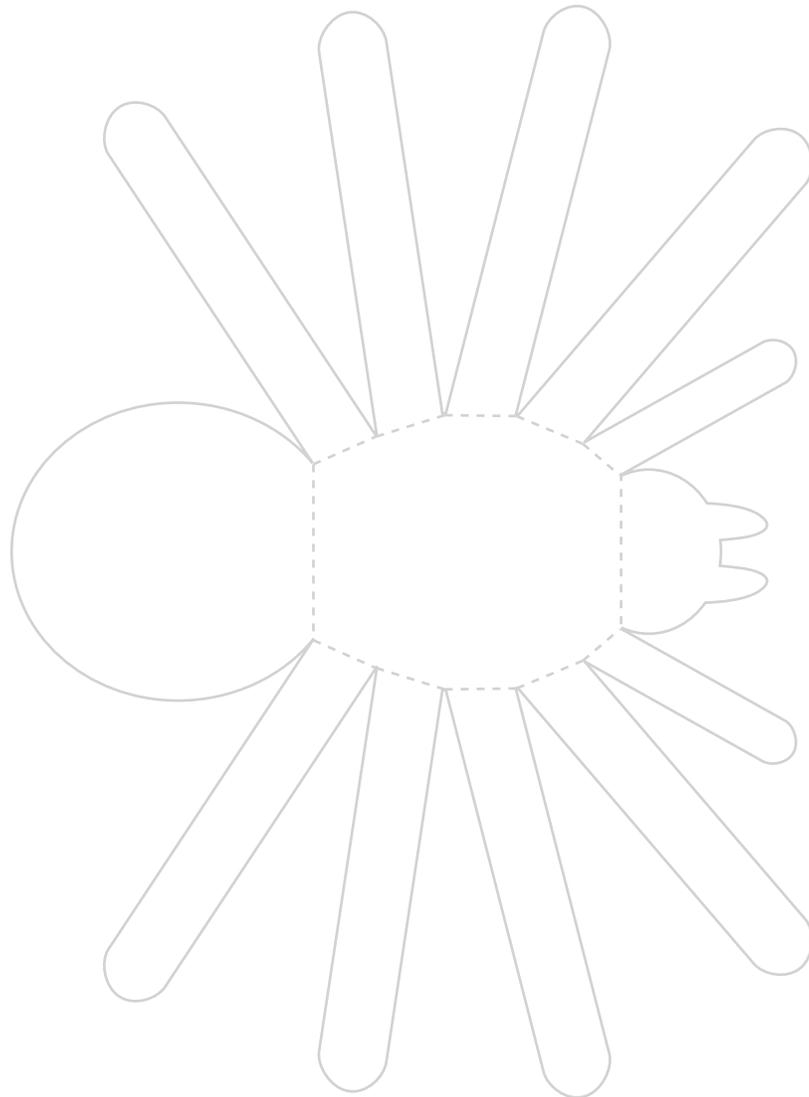

# INVENT THE MOST AMAZING CREATURES THE WORLD HAS NEVER SEEN!

## EXPERIMENT!

Color your spider below with colored pencils. Sure, you could make it hairy and brown, but why not try something bold? A robot spider? Or add some tennis shoes to each of the feet and make it a cartoony running spider? Think outside the web! Then cut out your spider and push and fold the paper to give the paper fibers some MEMORY! Adding folds can make your spider stand up off the table top and give it life! How can you pinch the legs to make them stronger and more creepy-crawly?

Session  
**2**

## FROM THE "AMAZING PAPER ART!" CLASS

These are little "feeler-do hickey thingies" (sorry to get all technical with the scientific terminology, but that's how I roll)!

Fangs are cool. But maybe these could be even cooler? (Drill bits? Big red kissy-lips? Who knows!)

## ASSIGNMENT!

Now TOSS out this spider template and design your own creature! Loosely follow the rules of nature, but how far can you PUSH it to make something truly amazing!

FACTOIDS:  
Arachnids = 8 legs  
Insects = 6 legs

COLLECT THEM ALL!

©2012 [www.DesktopGremlins.com](http://www.DesktopGremlins.com) | Your destination for free papercraft creations that are easy-to-build, fun to display and ultra-cool to share. Each of the Desktop Gremlins has a different story, unique characteristics and extraordinary reasons to be sitting on your desk. Discover a menagerie of wonderment!
